

Problem Statement – 3

Freelancing Platform

1. Objective

Develop a smart freelancing web or mobile application where freelancers can register, showcase their projects, accept payments, and receive client reviews. The system should streamline freelancer-client interactions, ensuring secure transactions and transparent feedback.

Key Features:

Features as follow:-

- **Freelancer Profiles & Portfolio**

Freelancers can create profiles, list their skills, and showcase previous projects to attract clients.

- **Project Listings & Proposal System**

Clients can post projects, and freelancers can submit proposals with estimated costs and timelines.

- **Secure Payments & Ratings** Integrated payment system ensures secure transactions, and clients can leave reviews and ratings after project completion.

Additional Features (Optional)

- **AI-Based Skill Matching** – Recommends freelancers based on client needs.
- **Real-Time Chat System** – Allows direct communication between freelancers and clients.
- **Milestone-Based Payments** – Ensures secure payments in stages.

Tech-Stack:

- Participants can chose any tech-stack of their choice
- Use any kind of External Apis if Required
